## (54) PRESERVATION OF MEAT OF TUNA

(72) Inventor(s):

ISHIMARU KOICHIRO

(73) Assignee(s):

**ISHIMARU KOICHIRO** 

(57) PURPOSE: To contrive to maintain freshness of tuna meat and to prevent change in color, by making tuna meat subjected to extremely low- temperature freeze treatment into a block state, packing in vacuum and then carrying out freeze treatment again.

CONSTITUTION: Tuna meat subjected to extremely low-temperature freeze treatment at -60±5°C is made into a block state, packed in vacuum into a packaging material made of synthetic resin such as PE film or PP film and the gap between the frozen tuna meat in a block state and the packaging material is made into a sealed state. Then the tuna mea is subjected to freeze treatment again at ≤-20°C.
